

Data Validation State Web Release 4.2.2
RELEASE NOTES

Release Date: July 2011

SUMMARY

The Data Validation (DV) State Web Software Release 4.2.2 has been installed on your system. This release contains the following fixes and enhancements to the existing web-based DV application.

Use Internet Explorer 6.0 browser or higher for best performance.

DVWS4-2-2 Enhancements	
Fixes and Enhancements:	
For Benefits Populations 4 and 12 and Tax Population 5, Report Validation (RV) score was not accurate and RV score displayed on the Population score screen was not the same as displayed on the RV screen.	Modified software to reflect the accurate score on both the RV and Population score screens.
For Tax Population 5, the dollar values of validation counts displayed on the Report Validation screen are truncated instead of being rounded.	Modified software to round the validation count dollar amount to nearest integer instead of truncating the dollar amount.
Missing Subpopulation samples are being generated incorrectly for the Benefits populations.	Modified software to generate the random samples first when the user hits the Missing samples before hitting Random samples in the View samples screen and then calculating the Missing samples.
In Tax Population 1, quarterly wages are being displayed as a negative amount when the amount exceeds a billion dollars in the tax reports.	Modified software to allow the quarterly wages to display dollar amounts over a trillion as positive amounts.
Enhancements to Wage Item Validations screen and logic.	Added new columns: Quarter, Year, Mode type, Sample Size and Cases Reviewed to the screen. A new algorithm is being applied in order to correctly calculate the Pass/Fail and Overall Validation scores. The functionality of Transmit button was changed according to the new requirements. Also modified database to reflect the above changes.
Special characters entered by the users in the comments text box should be allowed and able to transmit to the National Office.	Modified code to allow the user to enter special characters and transmit the comments as entered.

If any problems are encountered with the software, contact the Office of Unemployment Insurance (OUI) Technical Support Staff (Hotline) at 1 (800) 473-0188 for assistance.

Please provide a copy of these Release Notes to all users of the software.

Data Validation State Web Release 4.2.2
RELEASE NOTES

Release Date: July 2011

DVWS4-2-2 Enhancements	
Fixes and Enhancements:	
The application is taking a long time to display the data in the View Source table for Population 3 when the user clicks the NEXT button.	Created an index on the SSN for all v_population tables to allow the application to process and display the data faster when the user click on the NEXT button.

1. Known Issues

Problem	Work-around	Anticipated Fix
When user cancels a load on import screen, the software is taking whatever was entered previously as a period and using it to get the RV reported counts.	If user cancels a load, he/she should not proceed with the validation of the corresponding population until a new file for that population is loaded. Otherwise, the RV results could be incorrect.	Modify the software code to allow the user to cancel a load on the import screen without changing the previous reporting period.

2. Installation and Setup

The software has been installed on your web system and can be accessed from the Web State Applications Menu Page. See *Menu Access* for details.

3. Menu Access

DV State Web applications can be accessed from the State Web Applications Menu Page. The web application in this release is available under the following menu option:

[Data Validation](#)

[Validation Software](#)

4. Troubleshooting Information

N/A

If any problems are encountered with the software, contact the Office of Unemployment Insurance (OUI) Technical Support Staff (Hotline) at 1 (800) 473-0188 for assistance.

Please provide a copy of these Release Notes to all users of the software.
